INTRAD RHB-100 Buffer

INTRAD RHB-100 is a stylish unobtrusive method of protecting walls and other vulnerable interior surfaces from impact damage and wear. Typically used at low level in conjunction with a mid height handrail or crashrail.

The practical contoured PVC-U cover profile engages over a rigid aluminium core incorporating a resilient impact absorber, and is mounted on spacers. The result is a combination of strength and resilience. The aluminium core imparts rigidity, while the resilient shock absorber and spacers reduce the force of impact.

Whilst primarily used as a low level protection, INTRAD RHB-100 can be used at mid height or in horizontal pairs.

INTRAD RHB-100 Buffer

Benefits:

-  Tough profile
-  Low level protection
-  Chemical resistant
-  Reduces maintenance costs
-  Fire resistant. Class O rated

Other benefits include:

- Embossed impact resistant surface finish
- Resistant to scratching and abrasion
- Integrated range of system components
- Elegant and decorative
- Stock length 3.0m
- Projects 62mm
