

Royal Free Hospital

INTRAD has completed the installation of crashrails, handrails, cornerguards and bed head protection in the new PET Scanner room at the Royal Free Hospital.

The bold choice of wall finish is complimented by the soft Pebble Grey wall protection to give a striking contemporary look to the department. Using a twin colour design the neutral finish of the wall protection fits in perfectly.

Using a combined handrail/crashrail along with mid and low level crashrails the corridors are well protected but do not look crowded. Integrating vertical corner protection into the design gives complete protection in the corridors.

The side rooms also required a minimal amount of protection and Intrad Bed Head Protection was used to keep the walls free from chair damage.

Products Used:-
RCR-125 Combi-rail
RA2 Crashrail
RCA Cornerguards
BHB-125 Bed Head Buffers
